Setting new standards

Leaving home at dawn to catch the forest, mountains and animals awakening from their nightly slumber with all your senses heightened. The first, careful steps across the field. The excitement, the sense of presence, the adrenaline. Hunting is one of humankind's oldest traditions, a piece of heritage to both manage and nurture.

At Swedteam, we do this by constantly pushing the boundaries, by taking the best parts of our modern way of life and integrating them into this age-old tradition. We do this because even though the ever-changing conditions for hunting are, in themselves, part of its charm, the experience should not be ruined by damp or cold. We can't promise that you won't get hungry, that your dog will perform when it really matters, or that the animals will appear when you want them to. We can, however, promise that you will never need to cut short your hunting trip because the materials used to make your Swedteam clothing aren't up to the job.

The coming year looks set to be an exciting one. Swedteam continues to grow on the European market, and naturally this places new demands on us, but it also opens up a number of opportunities for development. During autumn 2020 we will be launching our new Ultra product family. Focusing on mobility and versatility, Ultra is a great choice for those who prefer lighter hunting and leisure wear. We're also taking the opportunity to give our Lynx outdoor trousers a facelift, and they are now being released in two different versions, as well as a larger range of colours. During 2020 we will also have another exclusive launch for you. Antibite™ is an insect-repelling treatment that can now be applied directly onto clothes for the first time. We are delighted to have exclusive rights to treat hunting clothes with this environmentally-friendly and effective substance in Europe. In spring 2020 we will be presenting a collection comprising five treated garments that we hope will take your hunting experience to the next level when it comes to comfort and safety.

I'd like to extend our sincere thanks for all the feedback you, our customers, have provided through a range of channels. Your help enables us to keep our finger on the pulse when it comes to our product development.

Happy hunting!

Ulf Segerqvist
Owner and CEO

Highlights in 2020

Lynx gets a facelift

Our popular Lynx outdoor trousers have been given a facelift. Lynx trousers are both lightweight and with an excellent fit. Thanks to stretch panels, they boast good mobility, and spacious zip-close pockets also help make them the perfect choice for active outdoor pursuits. We are currently developing two versions of these trousers: the versatile 'Light' model and the more durable 'XTRM' option. Lynx trousers are available in a range of colours, with fleece jackets and belts to match.

Our new Ultra family

If you're looking for light hunting clothes designed with mobility and versatility in mind, we think you'll love our new Ultra range launching in autumn 2020. Benefiting from a modern fit and design, as well as our waterproof Covertex membrane, this range is a great option for both active hunting and when waiting for that perfect moment.

This new product range will feature hunting sets for men and women, base sets and hats. Teamed with our existing Ultra Light fleece and Ultra Light anorak, you'll have a complete basic hunting wardrobe.

Share your experiences

Share your hunting and nature experiences by tagging us on social media. We love following your adventures, and your experiences help us to continuously develop and improve. **Follow us on Facebook and Instagram to see more of this year's new products.**

Swedteam

RE-ECO™

RE-ECO™ by Swedteam is our eco-friendly collection consisting of 100 per cent recycled polyester. The first item to get the RE-ECO™ fabric is one of our best selling hunting sets. In the long run, we will add this material in more styles. The collection also boasts other smart details, such as more environmentally friendly zippers and PFC-free surface treatments. **See the collection on pages 38-39.**

TechnoZone™

This new concept hails our first step towards integrating technology into our clothing.

First up is a state-of-the-art heating panel that can be used in conjunction with a smartphone app to help you warm up quickly. You find this technology in our Force Heat Pro Vest.

You can see it on page 15.

The perfect technology for your hunting experience

Hunting is an age-old tradition. Over the centuries, hunting techniques have developed, evolved and been refined, but the basics have remained the same. Different kinds of gear are required depending on your hunting location and style. Here at Swedteam we have a wide range of hunting and leisure clothing, so you can be sure we'll have just what you need for your next experience. By using materials and technologies specially designed for hunting and functionality respectively, we ensure that you are always well-equipped, and by combining modern

technologies with ancient tradition, we make sure you are set for a hunting experience above and beyond the ordinary. Spacious or slim fit, whatever your preferred look, here at Swedteam we have you covered. Our product development work is always focused on ensuring our clothing is comfortable to wear and move in. What's more, you can choose from a range of different technologies, materials and membranes, all tested with the help of experienced hunters so that you are perfectly prepared for each and every adventure.

Dressing right

To get the most out of your garments, it's important to use them correctly. Whatever the season we always recommend the multi-layer principle. **Layer 1** is worn nearest to your skin, so these garments are made of synthetic materials or wool for maximum breathability and moisture wicking capacity. **Layer 2** is a thermal middle layer. These garments are made of wool and synthetic materials for optimal breathability. **Layer 3** is the outermost layer, protecting you from external factors such as wind and rain. To keep you warm and dry, your hunting garments should be complemented with suitable accessories. Your feet and head are especially vulnerable. Good socks and headwear can make an enormous difference to your ability to keep warm.

Pro/Classic

Are you an active hunter with high focus on mobility, or do you want a more classic style? Now we've made it even easier to find the right clothes by dividing most of our range into two categories, **Pro** and **Classic**. **The Pro category** has garments

with a focus on flexibility, ventilation and a sportier appearance. The jackets are slightly shorter than the Classic jackets, and the products are designed for more active hunting. **The Classic category** is for wearers who want a traditional style with slightly wider fit and longer jackets.

Material & Technologies

Keep up to date with the latest functional materials at Swedteam.com

Protective membrane for all weathers

In environments where the weather can change from hour to hour, it's particularly important to give careful consideration to your clothing choices before heading out into the terrain. Once you get wet, be it due to sweat or rain, you'll start to get cold, and once coldness has set in it can be difficult to warm yourself up again when out on a hunt. But in addition to protecting you from extreme weather, your shell outfit must also be light, flexible and breathable. The level of waterproofing a piece of clothing offers is measured in its water column, i.e. how much water the outer side of the material can withstand before the inner side becomes wet. Your choice when it comes to the water column rating will depend on how long you intend to spend in the rain and what you will be doing. In other words, you will not always necessarily need the highest possible water column rating, instead it is better to choose your clothing based on your requirements, activity level and the level of ventilation you require. Here at Swedteam we have many years of experience of hunting in a changeable climate. Against this background we have developed two of our own membranes, always with hunters and their needs in mind. Regardless of which wind- and waterproof style you opt for today, you can feel safe in the knowledge that you'll be comfortable for the duration of your hunt.

Take care of your Swedteam products

To make sure your clothing continues to serve its purpose for a long time to come, there are a few things worth bearing in mind when it comes to looking after it. We recommend washing your clothing regularly, and tumble drying to reactivate functionalities and waterproofing.

On our website, www.swedteam.com, you can find out more about how to look after your clothing to retain maximum durability.

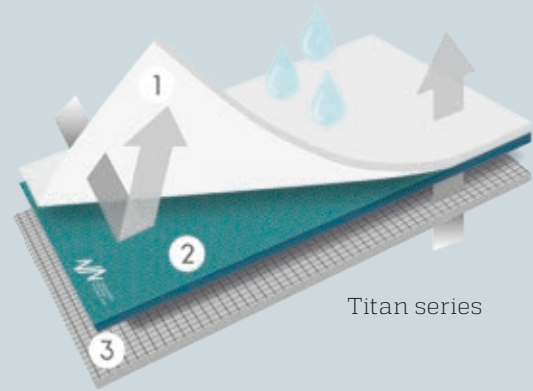

NIN 200

NEONORDIC®

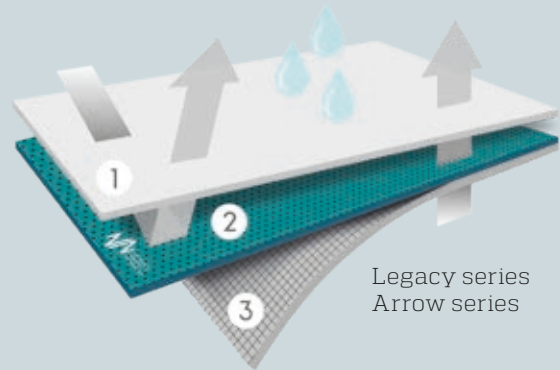

A supremely breathable membrane. Developed for unforgiving, changeable weather conditions. NEONORDIC® 200 is 100% windproof and waterproof with a water column of 20,000 mm. The material is flexible, silent and elastic.

1. Outer fabric - water and wind repellent
2. NEONORDIC®-membrane - breathable, waterproof and windproof
3. Lining

Sketches above shows the different constructions. Functionality is same in both constructions.

READ MORE ABOUT OUR DIFFERENT MEMBRANES AT SWEDTEAM.COM

Covertex® 100

Covertex® 100 is a protective membrane providing protection against wind and water. Covertex® 100 protects you from the full force of the weather but allows moisture to evaporate, so that you stay dry and comfortable. Furthermore, clothing made with the membrane is comfortable and light to move around in. Covertex® 100 offers a water column rating of 10,000 mm.

The power of invisibility

DESOLVE® Camouflage was created out of curiosity.

Almost every hunter has a story to tell about sitting still in the shadows with the wind behind them, hundreds of metres from their prey, when suddenly the deer looks up and stares straight at them. These stories, combined with unclear accounts concerning UV light and animals' improved vision, led us to try to figure out how animals' vision really works, and how to improve what we do in order to hide from them

“Our curiosity took us on a path of research and development that eventually resulted in the creation of DESOLVE® Camouflage, a pattern to fool animals, not hunters.”

more effectively. What we discovered led us to make some drastic and crucial changes in our approach to camouflage production. Our curiosity led us on a path of research and development that eventually resulted in the creation of DESOLVE® Camouflage, a pattern to fool animals, not hunters. Our research highlighted the massive problems with current camouflage patterns resembling sticks and leaves. Ungu-

lates (hoofed animals) don't see the way we do. Their vision is blurrier so they don't focus on detail. Instead they learn to focus their attention on outline. DESOLVE® is a camo pattern that breaks up this outline with large macro and micro shapes that create the illusion of depth, so the subject appears to be a series of small objects spread out across a range of dis-

tances. DESOLVE® Camouflage was developed and tested in the field over the course of hundreds of hours to manipulate the specific colour and light tones most prominent to ungulates, and the results are simply astonishing.

antibite™

natural protection against bugs and ticks

Don't become the prey

Anyone who spends any amount of time out in the forests and open terrain knows how annoying mosquitos and other insects can be, constantly buzzing around your head. A mosquito can smell its prey from far away, and just like hunters, they are alert and on the prowl day and night. Flies, wasps and ticks can also be a major nuisance. However, these insects aren't just irritating - despite their size, mosquitos are the deadliest animals in the world today. Due to climate change, as well as the fact we are travelling across greater distances than ever before, the number of people in areas where there is a risk being bitten and infected has grown markedly. Of the world's population, 80 per cent are at risk of catching one or more vector-borne illnesses. Now, for the first time, there is a sustainable and effective solution to this problem. Once again, Swedteam is leading the way, and we are delighted to have exclusive rights to treat hunting clothes with Antibite™ in Europe. During spring 2020 we will be releasing a jacket, trousers, half-zip sweater, shirt and cap that have undergone Antibite™ treatment.

What is Antibite™?

Antibite™ is a new technique for treating textiles with an insect repellent. The base ingredient of Antibite™ is IR3535, a substance that has been on

the market for over 30 years and is based on a natural amino acid. A research group at the University of Minho in Portugal has found a way of using nanotechnology to impregnate clothing with IR3535. This technique is known as Antibite™.

How does it work?

Insects use their sense of smell to find their way in nature. IR3535 is based on a natural amino acid that emits a smell signal warning insects to keep away. As Antibite™ is designed to repel rather than eradicate, the insects do not develop any resistance to the substance and it is not a reproduction inhibitor, as most traditional insect repellents are. The substance does not cause any skin irritation, is not absorbed into the body, is unscented, and has no side effects. What's more, it is also environmentally friendly and does not pose a hazard to mammals and fish.

Where are the products treated?

Antibite™ is applied using nanotechnology directly into the finished pieces of clothing at our partner's facilities in Portugal. As the substance penetrates the textile fibres, its efficiency is increased and the effect lasts for 80 washes.

What benefits does this offer the user?

With Antibite™, you don't need to use any other mosquito or insect repellents. As the active substance is located in your clothes, you'll be protected as long as you're wearing the clothing. The application process does not compromise the quality or appearance of the clothing, and the Antibite™ retains its effectiveness for at least 80 washes. The substance is completely environmentally friendly, meaning that the protection it offers does not come at the cost of nature or mammals.

Innovation and tradition working together.

We always strive to be at the leading edge of innovation and new materials. Our collection combines revolutionary technology with classic hunting garments. Quality clothes for all types of hunting.

TECHNOZONE™

By moving into this unique segment, we make sure to integrate high-end technical functions in our clothes. We use state-of-the-art heat panels with remote control through your smartphone. For this season, you find this exclusive feature in our Force Heat Pro Vest.

FORCE HEAT PRO M VEST

Lightweight vest equipped with unique I-Warm heat panels on back and chest.

Padded with Primaloft Insulation for maximum heat comfort and flexibility. This vest is fitted with the new Heat Panels by I-Warm. One large panel on the back, and two small panels on the chest. I-Warm panels are made in an entirely new construction and new materials. Heat in panels is transferred by a membrane instead of copper threads. It makes the panels lighter, more efficient, flexible and machine washable. Temperature is set in three levels. By using the switch on the vest, or by an app in your smart phone. There is also a built-in thermostat function, which switches off the heat when indicated heat level is reached. Power Bank, 10 000 mAh is included.

The heat vest is meant to be a second layer garment. It should be worn as close to your body as possible. Preferably on top of your base layer shirt, then you can add an extra fleece sweater or shirt on top. Please choose a tight size for best heat function.

DESOLVE[®] Camouflage

The revolutionary DESOLVE[®] Camouflage was introduced in 2017 and now has an established position in Swedteam's collection.

This collaboration grows in 2020 and Swedteam will continue to be the exclusive supplier of this camouflage pattern on the European market.

DESOLVE® Veil

The ultimate camouflage in the forest. The DESOLVE® Veil series uses brownish tones that are commonly found in the Nordic landscape. The design has sharp contrasts that trick the animal's eye and breaks up your human shape, making you invisible at any distance. Veil is a versatile pattern that will work in many different situations, but it is best suited in green surroundings such as forest or open country.

ALPHA PRO M JACKET

Hunting jacket with our Windbreaker technology. The fabric is waterproof and windproof and the seams are not taped.

DESOLVE® Zero

Camouflage for cold environments. To be able to camouflage yourself in snow and become invisible to the animal you need more than white clothes or white camouflage. With DESOLVE® Zero, you'll get a camouflage with strong contrasts that breaks up your body shape and does not reveal your presence to the animal. The pattern works best in fully or partially snow-covered fields and becomes the ultimate camouflage in winter and in the arctic or alpine environment.

RIDGE M CAMOUFLAGE SET

Lightweight hunting suit with DESOLVE® Zero pattern.

Camouflage set with revolutionary DESOLVE® Zero camouflage pattern. Made of light, water repellent material with excellent breathability. Non-detachable hood, adjustable at wrists and ankles. Smart storage with special radio pocket.

Protection/Dog Handler

Hardwearing clothes for excellent protection and freedom of movement. The ultimate equipment for dog handlers. Our popular Protection trousers offer high stab protection in the event of boar attacks, as well as effective wear resistance in tough terrain. The trousers are lined with our in-house developed CONPIERCE® Stabproof material, and are reinforced on the outside with Vectran™ in vulnerable areas. NEONORDIC® 200 liner protects against water and wind. Our hardwearing Dog Handler Jacket is designed in close collaboration with professional dog handlers.

PERSONAL PROTECTIVE EQUIPMENT ACCORDING TO STANDARD DIN EN ISO 13688: 2013

PROTECTION M TROUSER

The ultimate boar hunting trousers with focus on protection and safety.

High-quality boar hunting trousers with all materials and details carefully designed to provide high protection. Ultra-durable material protects against stab wounds and minimises wear and tear in tough terrain. Reinforced with protective CONPIERCE® and Vectran™ in the most vulnerable areas. Made with our prime quality NEONORDIC® 200 membrane for an optimal combination of waterproofing and breathability. Stretch panel on back for added ease of movement. Several leg pockets and traditional side pockets. Extra-high back with buttons for braces and tabs at ends of legs. Our Protection trousers are certified according to EC Type Examination Certificate K-EG 2017/8278. Tested according to German "Technische Spezifikation zur Prüfung von Keilerschutzhosen", DIN EN ISO 13688:2013. Compliant with health and safety requirements according to Annex II of Regulation (EU) 2016/425.

SIZE GUIDE

Sizecharts, cm. Measure Circumference or Length directly on your body. See picture.

- 1: Head-Circumference Measure 2cm above the ears around the forehead.
- 2: Chest Measure under the armpits, around fullest part of the chest and shoulderblades.
- 3: Waist Measure around the area where you normally wear your trousers.
- 4: Hip Measure around your fullest point, approximately 20cm below your waist.
- 5: Leg Measure from the crotch to your ankle bone.

- A: Hand Length The length of the hand is the distance between the wrist and the tip of the middle finger.
- B: Hand Width Measure the circumference around the palm of its widest point.

We reserve us from printing errors or changes of models. Find all the latest information at swedteam.com

All measurements in the guide are based on body measures. Swedteam PRO garments with a bit tighter fit, have small range of movement. Swedteam Classic garments with a wider fit, have big range of movement. Range of movement is always adapted in each style. Please note, this is only a recommendation. Fit and taste are always different from one person to another.
