

FALL/WINTER 2020 - 2021

 BERETTA

WORK BOOK

The 4 way stretch fabric is elasticized both vertically and horizontally thanks to a high presence of elastan fibers in warp and weft.

Apexical is the anti-UV treatment with UPF 50+ to protect from UV rays, blocking sun rays and providing a cool comfort.

Suitable to be used with BIS – Beretta Interactive System – garments. This system allows to put inside the garment the insulation layer.

BLP - Beretta Micro Fleece - is a fabric soft, comfortable, warm, able to dry quickly and durable.

Beretta Thermal Padding – is the exclusive Beretta padding that guarantees a good thermal insulation also in case of extreme cold. It is lightweight and has a very nice handfeel thanks to the correct balance of its fibers.

BWB EVO – Beretta Waterproof Breathable – is the exclusive Beretta membrane that guarantees complete waterproofness and wind protection to improve your outdoor experience in every rainy or windy weather condition. The BWB EVO membrane also ensures excellent breathability with its innovative molecular structure that allows evaporation of moisture from the body.

BWR – Beretta Wind Resistant – is the Beretta membrane studied to protect you from the wind.

COOLMAX fabric is the performance fabric that includes an effective fiber-based moisture management system. The system can move perspiration away from the body and through the fabric, where it can evaporate quickly, allowing the wearer to feel cooler and more comfortable.

CORDURA® is 10 times stronger than cotton and 3 times stronger than a common polyester fiber.

Dryarn provides excellent insulation. This is because it has the lowest thermal conductivity of any fibre thereby providing the best insulation against the outside environment. Dryarn creates a breathing barrier which insulates from the outside world and carries sweat from the inside out. An insulating, protective barrier which also breathes to ensure that the skin stays dry: warm in winter and cool in summer.

Gore-tex membrane is durably waterproof, windproof and highly breathable keeping your body dry by allowing perspiration vapor to escape so you remain cool during activity and warm during cool-down.

Garments made with GORE-TEX LTD constructions provide a good combination of durable waterproof protection, comfort and versatility through a combination of soft and high-performance face textiles, membranes and special lining. The membrane allows protection from the elements and high perspiration.

Lightweight insole with open-cell foam technology that ensures long-term cushioning, high breathability and moisture management.

Polartec® NeoShell® is the first fabric able to combine the characteristics of a soft shell - superior breathability, ventilation and stretch properties - with the waterproofness of a hard shell, offering the best of both worlds. Thanks to the combination of impermeability and levels of breathability never achieved before - enabled by the dynamic exchange of air - Polartec® NeoShell® decisively improves the micro climate inside the garment, and therefore comfort. From today athletes can keep dry and comfort during a wider range of activities, and with higher levels of effort than in the past. Polartec® NeoShell® "Dry inside and out. Join the revolution".

Polartec® Power Stretch® was developed to expand our base fabric's durability and range of motion. The majority of elastic base materials can stretch during movement, but lack the tensile strength to recover their original shape and become permanently damaged. By utilizing elastic fibers with enhanced resilience in our stretch construction we made a performance-fit base fabric that can handle the pressure of demanding physical activities. The main benefits of Polartec® Power Stretch® are:

- Resilient stretch.
- Wicks moisture.
- Highly breathable.
- Easy care

Polartec® Thermal Pro® fabrics, thanks to the 100% polyester velour, pebbled, or shearling surfaces, are the most visually dynamic and technically advanced of the Polartec® insulation fabrics.

Technical highlights:

- Provides warmth without the weight and the bulk of traditional insulating fabrics.
- Highly breathable to provide comfort in all activities; does not restrict the movement of moisture vapor.
- Dries quickly to minimize heat loss.
- Versatile and durable.
- Easy care.

Polartec® Wind Pro® was developed to strengthen our fabric's ability to resist the effects of strong winds. By adapting our fleece structure through tighter knit constructions we created a new fabric composition that drastically reduces wind permeation. This provides the thermal insulation benefits, comfort and breathability of fleece with the added performance abilities to defy the wind and repel all forms of moisture. The main benefits of Polartec® Wind Pro® are:

- Wind resistant.
- Water repellent.
- Warmth without weight.
- Highly breathable.
- Easy care.

Microfibers of which are made Primaloft® Gold® and Silver®, trap body heat, making this material the most thermally-efficient synthetic insulation available. This material is also water-repellent maintaining warmth when wet.

Benefits:

- Warmth without bulk.
- Water-resistant.
- Breathable.
- Packable.
- Lightweight.
- Superior softness.

Silaide treatment uses the power of silver to control the growth of bacteria and associated malodor which guarantees long lasting freshness.

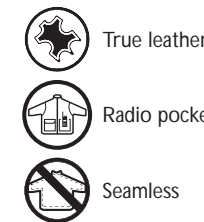

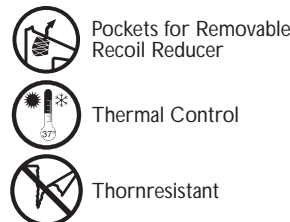

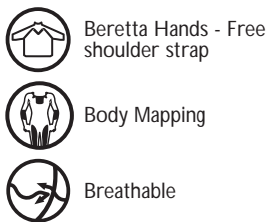

Teflon treatment helps to keep your garment dry and protects it from stains.

High density fabric that gives high compactness. This allow the garment to be resistant to abrasion and snagging. The fabric also has a durable waterrepellent treatment.

It's the brand worldwide known for quality, durability and high performance rubber outsole.

FALL/WINTER 2020 - 2021

WORK BOOK

## THIRD LAYER

The Beretta garments are designed to ensure maximum performance for both active hunting, for hare, wing or ungulates, or for static hunting hidden or high seat.

Each item is developed with high quality materials, waterproof, breathable, resistant and elastic, thanks to the partnership with leading brands in the technical sportswear to ensure customers maximum protection during their activity. Every detail of jackets and pants is strategically positioned to facilitate movements and have everything you need always at hand. All the jackets of the third layer are versatile and modular: thanks to the BIS - Beretta Interactive System - based on the science of layering, they can be used in different climatic conditions.

**Style Description**

Men's hunting Armour Charging Jacket waterproof and breathable with BWB EVO membrane, made with high tenacity Polyamide and inserts in Aramid fiber.

The men's hunting Armour Charging Jacket is studied for active hunt in the thickest and harshest environments where protection is needed from thorns and bushes. Armour Charging Jacket is waterproof and breathable thanks to the BWB EVO - Beretta Waterproof Breathable EVO - membrane bonded with the mesh lining. The face material is an abrasion resistant high tenacity Polyamide. Whilst the inserts in Aramid fiber increase protection in strategical areas, the elasticated inserts under the arms allow for mobility. The jacket is certified EN 471 high visibility orange and completed with radio pocket, front pockets, removable hood and game bag on the back.

In extreme cold weather this jacket can be combined with the BIS - Beretta Interactive System - articles.

**Details**

- Removable hood, "Easy Movement" preformed that fits perfectly on the head and follows the head's movements allowing for a good visual field.
- Neck area in warm and comfortable microfleece.
- Zip closure with flap and snap buttons.
- YKK zips.
- Radio pocket with laser-cut hole for the antenna.
- Large front pockets with internally the drawstring regulation.
- Ventilation zippers under the arms.
- Elastic inserts under the arms.
- Rubber Beretta Logo on the left sleeve.
- Anti-cut inserts in Aramid fiber in the front and in the forearm.
- Velcro cuff regulation.
- Elastic cuff for weather protection.
- Game bag extractable and washable with a single diagonal entry zip.
- Removable "Beretta Hands Free" shoulder straps.
- Inner pockets, one with zipper and one with velcro.

**Style Description**

Men's hunting Tri Active WP pants in 2 layer fabric, with BWB EVO-Beretta Waterproof Breathable membrane, taped seams and breathable mesh lining.

Men's hunting Tri Active WP pants are specifically conceived for active hunt. Lightweight and waterproof, they are realized in silent microfiber with the BWB EVO-Beretta Waterproof Breathable membrane bonded on the face material. All the seams are taped to ensure full protection from the elements. The pants have stretch waterproof panels in key areas to enhance the freedom of movements and they are provided with a breathable mesh lining that helps the moisture management keeping the body dry. In extremely cold weather condition the pants can be combined with the BIS - Beretta Interactive System garments.

**Details**

- Closure with snap buttons and zip.
- Belt loops.
- Two zippered hip pockets.
- Zippered cargo pocket on the right leg.
- Stretch waterproof inserts at the crotch and on the back to provide maximum freedom of movement.
- High lumbar support with comfort fabric insert.
- Elasticated waistband.
- Rubber finishing Beretta logo on the back central loop.
- One zippered pocket on the back.
- Velcro regulation at the bottom of the leg.
- Inner breathable mesh lining which helps the moisture management.
- BCMS icon at the bottom.

**Style Description**

Unisex long-sleeved underwear t-shirt in very soft polypropylene and microfibre polyamide blend, light, breathable and anti-bacterial thanks to the properties of the fibers it is made of.

The long-sleeved Flash shirt is the new frontier of comfort, perfect for becoming your second skin on the shooting range. Its seamless construction and the structure of the garment with different areas of compression allow perfect adherence to the body and extreme freedom of movement. The micro-hole construction facilitates transpiration in the areas of greatest need, while the three-dimensional construction on the shoulder gives support where the gun stock stand. Thanks to the natural breathability characteristics of polypropylene and polyamide you will remain dry and fresh, especially on hot summer days.

**Details**

## VICTORY

Sport, passion for competition and research are part of the Beretta DNA. A team of technicians and experts supports the professional shooters who represent us in the 5 continents, to enable them to train and compete with confidence and concentration. Beretta, as technical sponsor of the Italian Shooting Federation, Croatia and San Marino, and from 2016 the US and Russia, driven by the pride for the ten Rio 2016 Olympic medals, will continue the research and development on the best technical fabrics and materials, thanks to a continuous exchange of information with the athletes on materials, fit and comfort. The Victory range is characterized by improved materials performance and a design that recalls the love for competition and the pride of being part of the Beretta Team.

#### Style Description

Men's water repellent, warm and wind resistant shooting jacket with BWR membrane directly bonded to the outer fabric and Primaloft® Silver padding. Inside mesh pockets for the "Beretta Recoil Reducer" not included in the garment.

The Bysley WindShield jacket is an extremely high-performance, warm and comfortable garment, thanks to the Beretta BWR - Beretta Wind Resistant membrane, to the Primaloft® Silver padding and to the inner lining which guarantees high thermal insulation thanks to the particular material of which it is made of, without preventing breathability. You will remain warm and dry during winter shooting sessions.

The large front pockets allow you to easily reach the cartridges and the ambidextrous microsuede reinforcements add technical details and style to this jacket.

#### Details

- Knitted collar.
- Zip YKK with easy-grip zipper.
- Tone-on-tone microsuede reinforcements.
- Safety pockets with zip.
- Beretta brand and logo printed on the right sleeve.
- Bellows pockets.
- Adjustable cuffs with strap.
- Weatherproof cuffs.
- Back bi-swing.
- Internal pockets for the "Beretta Recoil Reducer", not included in the garment.
- Beretta logo and brand printed on the front.
- Beretta rubbered logo on the back yoke.
- Preformed sleeves for easy movement.

Line / Family Shooting Cover

#### Line / Family Description

The Shooting Cover line has been designed to ensure shooters the best comfort even in most adverse weather conditions. It is entirely made with the latest innovative materials, able to accommodate any movement and ensuring the perfection of athletic gestures.

## BERETTA BOOTS

Technology and design meet to create the Beretta footwear line, designed to offer you the utmost comfort, control and protection when hunting. The nine models in various combinations of materials use eight different types of Vibram® soles: the result is adaptation to any terrain in all weather, for full grip and stability. The unbeatable Gore-Tex® protection offers the waterproofing and warmth you need even in the most extreme conditions. The soles feature selfcleaning side grooves, fins at the toes and heels for greater grip on rocky surfaces, and a central section designed to guarantee you greater traction. All this is combined with the polyurethane anti-shock midsole that reduces joint stress and generates a truly comfortable fit and stability, keeping your feet dry and rested.
